

# Measurements & Uncertainties

errors

random

- readability of instrument

systematic

- instrument wrongly calibrated

- zero error (shows 2, should be 0)

when error is minimal

precise

accurate

quantities

vectors

"numbers with direction"

displacement

velocity

force

E-field strength

...

scalars

"just" number

distance

speed

mass

area

...

## Measurements & Uncertainties II

$$2,056 \hat{=} "2,055 - 2,057"$$

In calculations:

number of significant figures in output  
must not exceed number of significant figures  
in least exact input

absolute uncertainty  $\pm 1m$

fractional uncertainty  $\pm 0,01$

percentage uncertainty  $\pm 1\%$

relative

{

- multiplication/division  $\rightarrow$  add percentage uncertainties
- powers  $\rightarrow$  multiply percentage uncertainty with power
- addition/subtraction  $\rightarrow$  add absolute uncertainties
